

Safety Distances for Safety Systems

General safety distances

Safety distances relative to human size must be taken into consideration when securing dangerous areas. These safety distances are based on the reach of a person (14 years or older) in the direction of the dangerous area with their own body parts and without the use of objects, then a safety margin is added.

Opening width e	Safety clearance		
	Slot	Square	Circle
$e \leq 4$	≥ 2	≥ 2	≥ 2
$4 < e \leq 6$	≥ 10	≥ 5	≥ 5
$6 < e \leq 8$	≥ 20	≥ 15	≥ 5
$8 < e \leq 10$	≥ 80	≥ 25	≥ 20
$10 < e \leq 12$	≥ 100	≥ 80	≥ 80
$12 < e \leq 20$	≥ 120	≥ 120	≥ 120
$20 < e \leq 30$	$\geq 850^*$	≥ 120	≥ 120
$30 < e \leq 40$	≥ 850	≥ 200	≥ 120
$40 < e \leq 120$	≥ 850	≥ 850	≥ 850

* If the length of the slit-shaped opening ≤ 65 mm, the thumb acts as a limit and the safety distance can be reduced to 200 mm.

Reaching around edges

When reaching around arbitrary edges, the safety distances are as follows:

for the hand from the base to the tips of the fingers at least 130 mm

for the hand from the wrist to the tips of the fingers at least 230 mm

for the arm from the elbow to the tips of the fingers at least 550 mm

for the arm from the shoulder to the tips of the fingers at least 850 mm

Entry into dangerous areas with the lower limbs

Acc to DIN EN ISO 13857, for a ground clearance ≤ 200 mm, the foot safety distance must be ≥ 665 mm. This strictly assumes a standing position without any additional assistance.

According to DIN EN ISO 13857, slotted openings > 180 mm and square or round openings > 240 mm permit entry for the entire body.

If there is a risk of slipping or abuse, the specified value may be unsuitable. Additional measures may be necessary to restrict access.

Reaching over edges on work or safety equipment

When reaching over edges on equipment or safety mechanisms, the required safety distance is satisfied if the height of the dangerous area in mm (A) and the height of the protective structure in mm (B) are no less than the corresponding value in the table below for horizontal distance from the dangerous area in mm (C). This assumes that the protective structure has a height of over 1000 mm. The area between the safety structure and the dangerous area may not be entered.

Height of danger area in mm (A)	Height of protective structure in mm (B)
